How it works

Chaperone has been designed as a multifunctional spray additive offering class leading spray drift control. With different modes of action Chaperone is also an ideal antifoam additive improving coverage and a great pod sealant.

Shear resistant polymer offers class leading spray drift control increasing the droplet surface tension producing fewer small particles in turn in-flight evaporation is reduced.

Chaperone contains three types of pH buffers and water conditioners with differing modes of action, together with anti-foam to ease sprayer filling and surfactants to improve coverage.

Benefits

- Reduces spray drift
- Eliminates foam production
- Reduces spray retention
- Rainfastness
- Reduces shatter losses with less pod splitting

Water			Spray Drift
pH Buffer	Water Conditioner	Anti Foam	Drift Control
✓	✓	✓	✓

Chaperone is a unique multifunctional spray additive offering excellent spray drift control.

Pack Size 5 litres

Dose Rate 0.25 – 1 litre

Examples of tank mix partners

- With glyphosate
- Grassland herbicides
- OSR pod shatter reduction

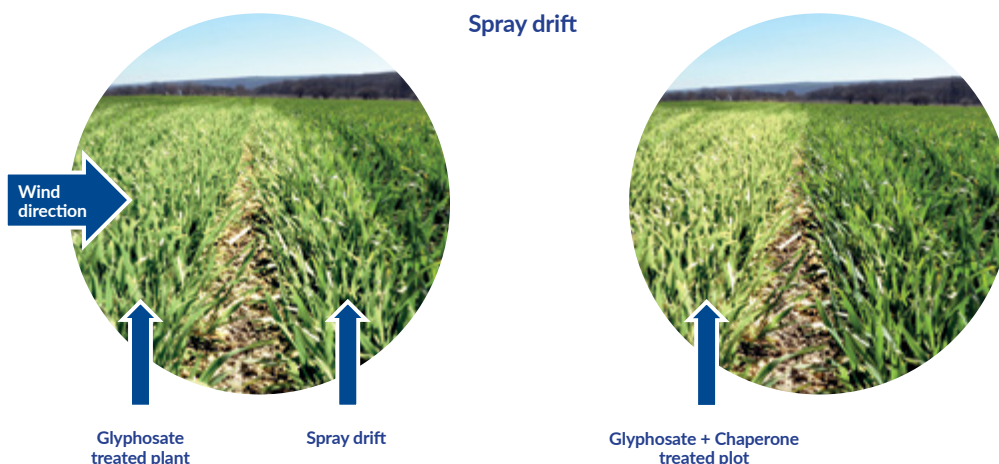

Chaperone should be added to the tank first

Chaperone encourages even drying of pods and less pod splitting.

This reduces shatter losses without effecting harvest date or moisture content.
