How it works

Designed specifically as an application aid for use with residual herbicides, Grounded AD improves crop safety and establishment and increases yield.

Residual herbicides applied pre or early post emergence are often subject to turbulence under the spray boom, resulting in spray drift and poor soil coverage.

Grounded AD reduces spray drift, ensuring even deposition over the soil surface. Also increases adsorption to soil in the zone where most weed seeds germinate from.

Spray drift	Soil	
Drift control	Soil deposition	Soil adsorption
