How it works

When crops are adjacent to sensitive areas, margins or other off-target regions, ensuring effective drift reduction when applying plant protection products becomes imperative.

LOK-IT works by increasing droplet surface tension to ensure fewer small spray particles are produced. This means that in-flight evaporation is reduced, application is more targeted, and sprayer efficiency is improved.

LOK-IT also increases droplet adhesion to the leaf surface, whereas humectants control droplet drying.

Unlike alternative products, LOK-IT is specifically designed to reduce spray drift and is not an adjuvant.

Benefits

- Minimise the impact of spray drift
- Maximise product performance
- Protect neighbouring margins or crops
- Exceptionally good tank-mixer

Spray drift
Drift control
✓

LOK-IT reduces spray drift and is an exceptionally good tank mixer.

Pack Size	1 litre standard
-----------	------------------

Dose Rate	0.25 l/ha
-----------	-----------

Excellent tank-mix compatibility
